EDUCATION

University of California, San Diego – La Jolla, CA

Jun 2026

Master of Science, Data Science (GPA 3.92)

Relevant Coursework: Scalable Data Systems, Algorithms for Data Science, Recommender Systems, Machine Learning, Advanced Text Mining, Biomedical NLP, Data Management, Data Science Programming

College of Engineering Guindy, Anna University – Chennai, India

Apr 2023

B.E. in Computer Science and Engineering (GPA 3.98)

Relevant Coursework: Data Structures and Algorithms, Operating Systems, Distributed Systems, Object Oriented Analysis and Design, Database Management Systems, Computer Networks, Software Engineering, Machine Learning, Deep Learning, Java Programming, Programming with C

EXPERIENCE

Software Engineer – Société Générale Global Solution Centre

Jul 2023 – Aug 2024 | Chennai, India

(Tech subsidiary, Top-5 European bank)

- Eliminated **100%** of manual analysis time and improved compliance team efficiency by **50%** by developing AML alert classification dashboards processing **50M+** daily transaction records with real-time filtering and automated backend triggers.
- Accelerated data processing time by **40%** by implementing Spark transformations and Parquet partitioning for **2** AML business units across AWS S3 and Hadoop, optimizing query performance on **50M+** records.
- Migrated **50M+** records with **zero** data loss by spearheading cross-functional architectural design reviews for the transfer of **7** critical AML datasets from Palantir OSv1 to OSv2, resolving schema incompatibilities.
- Cut policy lookup time by **60%** by designing and deploying REST APIs and a full-stack internal policy platform in HTML, CSS, and JavaScript, serving **200+** employees.
- Designed and deployed RESTful backend services with real-time data access endpoints supporting **200+** internal compliance stakeholders across AML workflows.
- Decreased AML transaction query processing time by **20%** by integrating classification and anomaly detection ML models into SQL-based CI/CD pipelines in Palantir Foundry, eliminating the need for additional compliance staffing.
- Partnered with compliance analysts and risk teams to translate regulatory AML requirements into 3 automated pipeline workflows, reducing manual review burden by 12 hours per week across a 4-person compliance team.

PROJECTS

HemsHappen App RAG-Based Medical Chatbot | [Link](#)

Sep 2025 – Feb 2026

- Accepted at Digestive Disease Week 2025, validated by board-certified gastroenterologists for clinical accuracy
- Achieved 100% clinical safety pass rate on 38 patient queries, outperforming Med42-8B by 42 percentage points
- Built RAG backend using FAISS vector search and Claude Sonnet 4 over curated GI clinical guidelines

SplitRight - Expense Splitting PWA for Roommates | [Link](#)

Oct 2025 – Dec 2025

- Built full-stack PWA using Next.js 14, Node.js, and PostgreSQL with Dockerized deployments via Vercel and Railway
- Engineered debt simplification algorithm across 3 split modes with JWT auth and real-time balance tracking
- Configured offline support via service workers and web manifests for native iOS and Android experience

LegalInsight, Self-RAG Legal Contract Analyzer | [Link](#)

Mar 2025 – May 2025

- Built Self-RAG contract analyzer with EigenScore hallucination detection across 6,858 LegalBench-RAG queries using Flask and LangChain
- Achieved 4.26x faster contract review and 74.65% semantic consistency, improving token efficiency by 16.2%

TECHNICAL SKILLS

Programming Languages: Python, JavaScript

Data Engineering & Databases: SQL, Apache Spark, Hadoop, FAISS

Cloud & DevOps: AWS (S3, Athena, DynamoDB), GitHub, CI/CD, Jenkins, Palantir Foundry, Docker, Apache Airflow, dbt Core, Databricks

Web Frameworks: Flask, React, FastAPI, HTML, CSS, Vercel
